WORKING PAPERS

[Fintech, Bank Branch Closings, and Mortgage Markets](#), 2022

Abstract: This paper studies whether bank branch closures affect fintech mortgage lending in the U.S. using data for the 1999–2016 period. My identification exploits granular exposure to post-merger branch consolidation. I find that branch closures lead to a persistent increase in fintech lending. Fintech mortgages grow by a total of 8% relative to non-closure tracts in the nine years that follow a closing, while bank mortgage lending falls by 44%. The results show a strong substitution pattern and are driven by wealthier areas and areas with relatively smaller populations of women, seniors, and minorities.

[How Selective Access to Financial Information Affects How Investors Learn](#), with Gaël Le Mens, 2022

Abstract: In this paper, we compare learning in two common settings in financial markets. One in which investors can observe the outcome of an investment alternative only if they invest in it, and another in which they can always observe the outcome even if they do not invest in it. We provide empirical evidence that investors' beliefs are, on average, 5% closer to the objective Bayesian beliefs given the observed information when investors are in a setting where they have access to financial information because of endogenous choice. Then we can describe the mechanism that explains our findings. We show that the endogenous creation of the sample of information triggers different cognitive processes. These alternative processes cause better information processing and are of enough magnitude to help overcome the effect of sampling errors.
